GRANITE SINKS

A New Definition of Aesthetics and Durability

made by

UKINOX

ABOUT US

Rooted in Ukinox's 30+ years of excellence in sink manufacturing and export,
UKSTONE represents the next chapter of innovation and craftsmanship.
Leveraging decades of experience and expertise in OEM granite sink production,
Ukinox is now bringing this knowledge under its own roof
launching a new era of in-house granite sink manufacturing under
the UKSTONE brand.

Material Technology: CRYSTAGRANITE®

CRYSTAGRANITE is a special composite material consisting of 80% natural stones and 20% high-performance resin Thanks to this advanced formulation:

- * Deep surface effect and eye-catching surface design

- * Non-porous, impact-resistant, and smooth structure that prevents liquid and dirt penetration

- * Robotic composite technology used in the production process ensures both aesthetic and mechanical high-level performance

- * High purity and light-reflecting properties of natural stone combined with special resin and pigmentation techniques provide homogeneous color distribution and long-lasting visual quality

- * Premium Kristalstone sink performance supported by neopentyl glycol (NPG)-based, acrylic-modified resin with high UV and chemical resistance

UKSTONE

2. Hygiene and Safety

* Surface resistant to bacterial formation

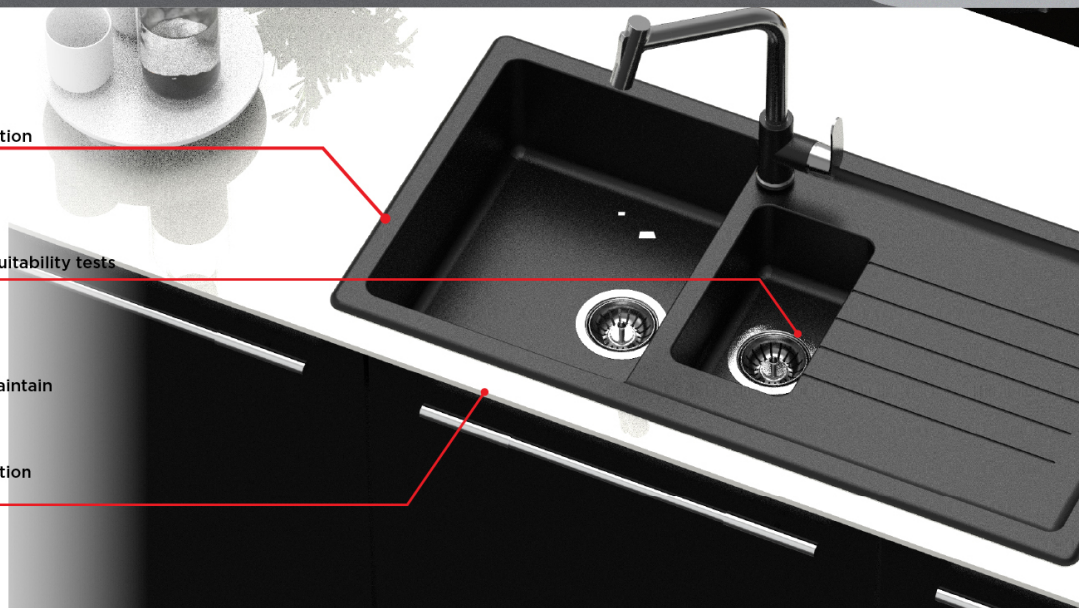

* Successfully passed food contact suitability tests

* Low water absorption rate helps maintain hygienic surface structure over time

* Non-porous structure prevents detergent residue and dirt accumulation

3. Aesthetic Design

* Matte surface options compatible with modern kitchens

* Wide color palette: black, anthracite, white, gray, and custom colors

* Various model alternatives such as single bowl, double bowl, drainer, and corner sinks

* Surfaces enriched with special pigment technology that provides metallic shine and color depth

* Aesthetic surfaces resembling natural granite thanks to the harmony of resin and natural stone

4. Durability and Performance

- * Heat resistant: withstands high temperatures in daily kitchen use
- * Strong structure against scratches, chemicals, and impacts for long-lasting use
- * UV resistant - does not fade in color
- * Water and oil-repellent surface offers a hygienic appearance and long-term cleaning ease

- * All products are manufactured in accordance with EN 13310 European standards
- * High mechanical strength with high modulus of elasticity and flexural strength
- * Thixotropic structure ensures optimal and superior surface quality during production

5. Functionality

* Ergonomic design provides maximum usable space

* Compatible with both under-mount and top-mount installation options

* Waterproof and stain-resistant surface allows effortless maintenance

6. Sustainability

Recyclable material structure
contributes to ecological balance

Low carbon footprint thanks to production
technology that minimizes natural resource
consumption

High efficiency in resin formulation
reduces material waste during production

7. Overall Capacity

- 1 fully automated production line operational by **2025**
- Annual capacity of **100,000 units** in the first phase
- Second production line to be launched in **Q3 2026**
- **300.000 Units/year** in **2027**
- 5 Models ready for production, additional 1 model capacity per week
